#_09: Walk-in customer username 01906198500. Use #09 for getting user details from username.

#_08: To get full address for a certain address id (id from #_07). This allow get request.

#_07: Use the endpoint to get all the address ids of a certain user with get request. Use 2, 9 as user id.

First API will back you, all-issue details of the certain outlet.

Second API is for a certain requisition of certain outlet.

Third API provide you all requisition status for the given outlet.

All are GET request.

Go through this endpoint no-4 with POST request. Pass a JSON Object like below sample. We will change the read status of those issue_id you will send by the JSON and you will find only new issue for the certain outlet from endpoint no-5 with GET request.

For any query, call at 01725361208.

Sample for no-4 endpoint [Same as create requisition]

```
{
  "receive_data":{
    "issue_id":3,
    "productInfos":[
      {"product_id":2904, "product_quantity":38, "purchase_price":600},
      {"product_id":2905, "product_quantity":24, "purchase_price":600},
      {"product_id":2906, "product_quantity":18, "purchase_price":600},
      {"product_id":2907, "product_quantity":32, "purchase_price":600},
      {"product_id":2908, "product_quantity":24, "purchase_price":600},
      {"product_id":2909, "product_quantity":29, "purchase_price":600}
    ]
  }
}
```

Store POS sales data: use #6 with POST request. Sample given below -

Sample request for no-6 endpoint

```
{
  "sales_data": {
    "user_id": 3128,
    "walk_in_customer_name": "Md Biplob Mia",
    "walk_in_customer_phone": "01725361208",
    "outlet_id": 2,
    "pos_sale_id": 145,
